1:

Where do I change this image? And how do I edit the page it is linked to? (I need to be able to change this too as it may be linked to account settings or notification page. Or even any

ANSWER:
Go to your source code, find this line of codes
  <!-- Section1: Link to spesific page -->
  <a data-offline="true" data-params="value_id:5557" data-state="contact-view"><i class="fas fa-comment-alt"></i>
  <!-- <a data-offline="true" data-params="value_id:5557" data-state="contact-view"><img src="https://unpkg.com/ionicons@5.5.2/dist/svg/chatbox-outline.svg"> -->

If you need to use font awesome icon, replace this code *<i class="fas fa-comment-alt"></i>* from this line of complete code
  <a data-offline="true" data-params="value_id:5557" data-state="contact-view"><i class="fas fa-comment-alt"></i>

In case you want to use an image as an icon, enable this line of code below by remove *<!--* before ancor tag and *-->* after end of ancor tag.

<!-- <a data-offline="true" data-params="value_id:5557" data-state="contact-view"><img src="https://unpkg.com/ionicons@5.5.2/dist/svg/chatbox-outline.svg"> -->

Should be like this
<a data-offline="true" data-params="value_id:5557" data-state="contact-view"><img src="https://unpkg.com/ionicons@5.5.2/dist/svg/chatbox-outline.svg">

Change the image with your own image by remove this image URL *https://unpkg.com/ionicons@5.5.2/dist/svg/chatbox-outline.svg*

In this original source code, I use black icon, but I use CSS to change the image color to white. If you use white image icon, find this following code and remove *filter: invert(1);*
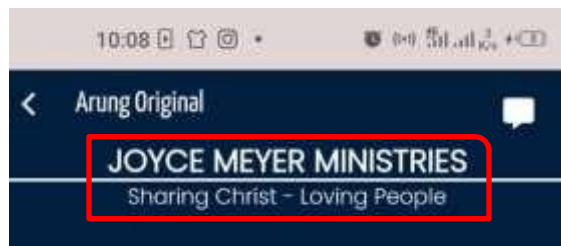

The complete code if you using black img
.header a img {
  width: 35px;
  margin-top: 10px;
  filter: invert(1);
}

If white should be like this:

.header a img {
  width: 35px;
  margin-top: 10px;
  filter: invert(1);
}

2:

how to I change this section? I can see that I can easily simply type the words that will be displayed here (as it is now). But I will equally want the ability to be able to upload image there. The client may be using logo and want it displayed there. The image can be uploaded on Imgur and then brought into the app.

ANSWER:
By default, this part created by text. You can find the code of this text by searching this lines of code

```
<!-- Section 2: Title and Subtitle -->
<h3>JOYCE MEYER MINISTRIES</h3>
<p>Sharing Christ - Loving People</p>
<!-- <img src="https://joycemeyer.org/Content/Images/logo-custom.svg"> -->
```
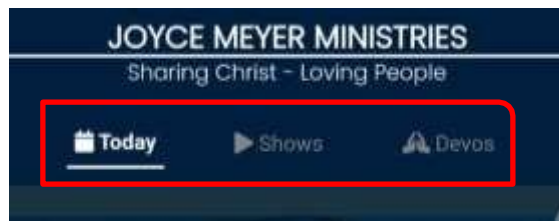

In case you want to use an image, enable this line of code

```
<!-- <img src="https://joycemeyer.org/Content/Images/logo-custom.svg"> -->
```

Then, adjust the image size by change the image with in this css code

```
.header img {
    width: 70%;
    object-fit: contain;
    margin-top: 10px;
}
```

3:

How and where do I edit this? Both the image and text. i.e Today, Shows, Dev. I need to be able to change them, as the functions may change as we continue.

ANSWER:

You can change this section by find this following codes

```
<ul class="nav nav-tabs" role="tablist">
  <!-- Tab 1 Title: Link to Todays content page-->
  <li class="active">
    <a href="#today" role="tab" data-toggle="tab"><icon class="fas fa-calendar"></icon> Today</a>
  </li>

  <!-- Tab 2 Title: Link to Todays content page-->
  <li>
   <a href="#shows" role="tab" data-toggle="tab"><i class="fas fa-play"></i> Shows</a>
  </li>

  <!-- Tab 3 Title: Link to Todays content page-->
  <li>
    <a href="#devos" role="tab" data-toggle="tab"><i class="fas fa-praying-hands"></i> Devos</a>
  </li>

  <!-- If need to create mote tab, just copy the tab 3 script above from tag <li> to end of tag </li>   -->
  </ul>
```

The icon taken from font awesome. You can replace the icon by remove *fas fa-calendar* (for example) with your own icon. Recommended to using font awesome icon.

If you need to add more tab, copy this lines of codes

```
  <li>
    <a href="#devos" role="tab" data-toggle="tab"><i class="fas fa-praying-hands"></i> Devos</a>
  </li>
```

Then change it as you want.

Important thing:
Reference (href) should be an ID of the section you want to open when the button clicked. For example
`<div class="tab-pane fade active in" id="today">`

In this case, you may need to copy this following codes as a section, same as today, shows, and devos.

All codes inside those comment

4: Is it possible to bring in an entirely page. I am happy with the way the first column comes out. But I want the ability to be able to bring one of the pages on the app (made not available on menu) to be shown once the column is clicked.

See image .

As you can see, what is showing in the ilustration above is a page within the app that I have already made invisible on the menu.

ANSWER:

For now, I have no idea to create like this. Maybe one time, but honestly not now. I will try to do that.

5:Alternatively, even if I want it to still be as you've designed it, where exactly do I change these elements and details.

TODAY TAB

1. Youtube link can be found in this code

<!-- Start of Tab Todays first section -->

<div class="embed-responsive embed-responsive-16by9">

<iframe width="853" height="480" src="https://www.youtube.com/embed/-CofN9ziP3w" title="YouTube video player" frameborder="0" allow="accelerometer; autoplay; clipboard-write; encrypted-media; gyroscope; picture-in-picture" allowfullscreen></iframe>

</div>

<!-- End of Tab Todays first section -->

Note: Just change the video URL

2. **Question of the day section**

<!-- Start of Tab Todays Question of the Day section -->

<a data-offline="false" data-params="value_id:5557" data-state="contact-map">

<div id="daily-question" class="today-features features d-flex flex-row align-items-center justify-content-space-between">

<div class="today-features features-image">

<img src="https://i.pinimg.com/originals/66/33/51/663351148bfd3ef1a3472ed67eebbf75.jpg" alt="joyce_meyer">

</div>

<div class="today-features features_content">

<div class="today-features features_text">Question of the Day</div>

<div class="today-features features_title">How do I balance competing needs in my life.</div>

</div>

</div>

**

<!-- Start of Tab Todays Second section -->

If want to add a new section like **Question of the day section**, just copy the above code from tag <a> to the end of tag

3. **Daily Devo section**

<!-- Start of Tab Todays Daily Devo section -->

<a data-offline="false" data-params="value_id:5557" data-state="contact-map">

<div id="daily-devo" class="today-features features d-flex flex-row align-items-center justify-content-space-between">

<div class="today-features features_content">

<div class="today-features features_text">Daily Devo</div>

<div class="today-features features_title">The Beauty in Silence</div>

</div>

</div>

**

<!-- Start of Tab Todays Daily Devo section -->

If want to add a new section like **Daily Devo section**, just copy the section above from tag <a> to the end of tag

4. **Slider section**

Because this section use so many codes and too long, please find the comment bellow on the source code, still on Todays tab.

<!-- Start of Todays Sliding Card -->

*   …. Codes over here*

<!-- End of Start of Todays Sliding Card   -->

If you want to create a new section of slider, copy all the line of code inside these comment.

In case you just need to add new card slider, you can find below codes

<!-- Fourth card start here -->

<a data-offline="false" data-params="value_id:5557" data-state="contact-map">

<div id="slider-img" class="responsive">

<div class="shows-devos">

<a data-offline="false" data-params="value_id:49235,product_id:11183"

data-state="commercepro-product-view" target="_top" href="javascript:void(0);">

<img id="slider-img" src="https://www.joycemeyer.org/-/media/JoyceMeyer/Image-Galleries/Conference-Gallery/conf-img-1.jpg" alt="Cinque Terre" width="600"

height="400">

<div class="desc">

<div class="title">Study it. Live it. Love it.</div>

<p class="prod_desc">In His Word, the Bible, God gave us the perfect manual to get to know Him and learn to navigate this life He has given us. </p>

</div>

**

</div>

</div>

**

<!-- Fourt card ending here -->

Copy the above script and paste it above this comment

<!-- Fourt card ending here -->

Don't forget to change the URL of the card image

5. How to study bible section

<!-- Start of Tab Todays How To Study Bible section -->

<a data-offline="false" data-params="value_id:5557" data-state="contact-map">

<div id="column3" class="col-lg-4 features_col">

<!-- features Item -->

<div class="features d-flex flex-row align-items-center justify-content-start">

<div class="ml-auto">

<div class="features_image">

<img src="https://joycemeyermedia.com/SitecoreFiles/Study/logos/logo-the-word.svg">

</div>

<div class="title">

<h3>HOW TO STUDY BIBLE</h3>

</div>

<div class="button">

<button>START FREE STUDY NOW</button>

</div>

</div>

</div>

</div>

**

<!-- End of Tab Todays How To Study Bible section -->

If want to add a new section like **How to study bible section**, just copy the above section from tag <a> to the end of

tag

6. Gratitude …. Section

<!-- Start of Tab Todays Gratitude is Simple but powerful section -->

<a data-offline="true" data-params="value_id:5557" data-state="contact-form">

<div id="column4" class="col-lg-4 features_col">

<!-- Features Item -->

<div class="features d-flex flex-row align-items-center justify-content-start">

<div class="ml-auto">

<div class="features_image">

<img src="https://joycemeyer.org/-/media/JoyceMeyer/Featured-Resources/Power-of-Thank-You/POTY_Book_v2.png" alt="joyce_meyer">

</div>

</div>

<div class="features_content">

<div class="features_text">Gratitude is Simple but powerful</div>

<div class="features_title">

<button>GET YOYE'S NEW BOOK</button>
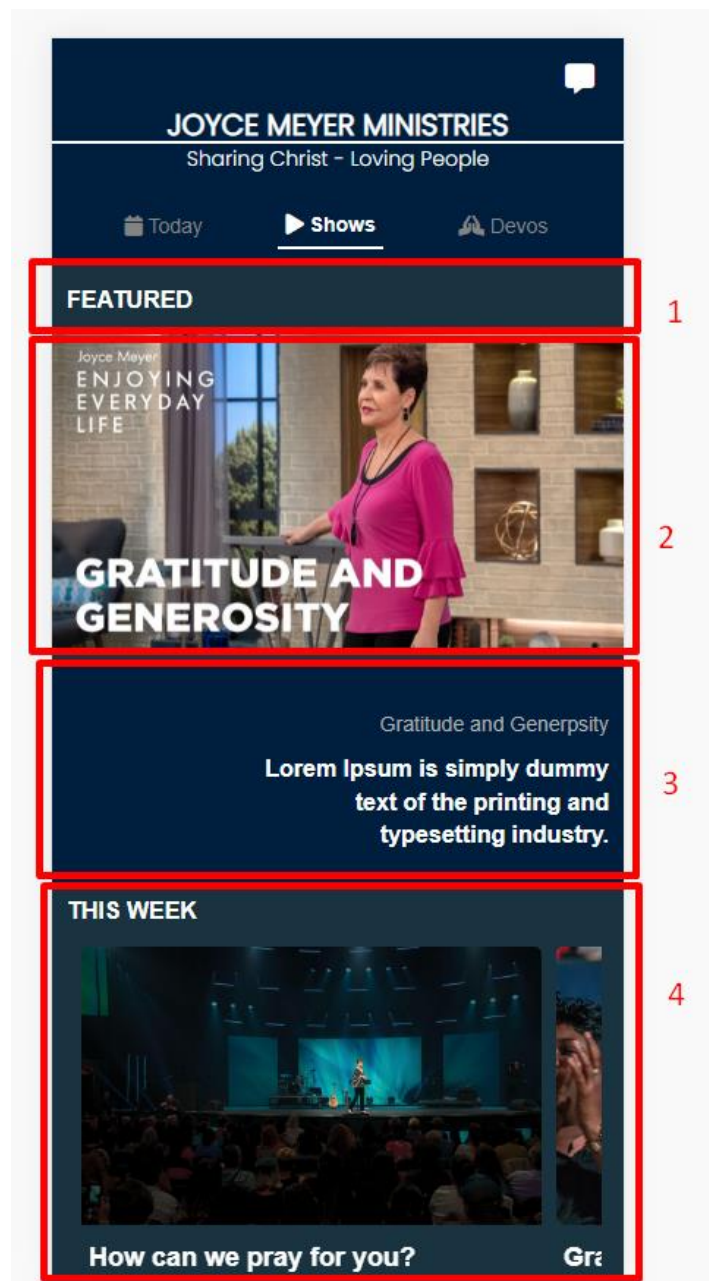

</div>

</div>

</div>

</div>

<!-- End of Tab Todays Gratitude is Simple but powerful section -->

If want to add a new section like Gratitude is Simple But Powerful Section, just copy the above section from tag <a> to the end of tag

SHOWS TAB

1. **Features section 1**

   <div class="section-title">

   <h4>FEATURED</h4>

   </div>

2. **Gratitude and generosity section 2**

<!-- Start of Tab Shows first section -->

<div class="embed-responsive embed-responsive-16by9">

<img src="https://www.joycemeyer.org/-/media/JoyceMeyer/Broadcast/Show-Images/1480/1480_4_Spotlight.jpeg?h=761&w=1132&la=en-AU&hash=CB6F89B9E65648156C0DF2985CA0522C">

</div>

<!-- End of Tab Shows first section -->

3. **Gratitude and generosity section 3**

<!-- Start of Tab Shows Second section -->

<a data-offline="false" data-params="value_id:5557" data-state="contact-map">

<div class="features d-flex flex-row align-items-center justify-content-start">

<div class="features_content">

<div class="features_text">Gratitude and Generpsity</div>

<div class="features_title">Lorem Ipsum is simply dummy text of the printing and typesetting industry.

</div>

</div>

</div>

**

<!-- Start of Tab Shows Second section -->

If want to add a new section or thirt section, just copy the second section above from tag <a> to the end of tag

4. **This Week section**

<div class="section-title">

<h4>THIS WEEK</h4>

</div>

5. **Slider section**

Copy code inside comment

<!-- Start of Thirt section: Sliding Card -->

Codes goes here

<!-- End of Thirt section: Sliding Card -->

Note: do the same thing like on Todays Tab for slider

6. **How to study Bible Section**

<!-- Start of Tab Shows HOW TO STUDY BIBLE section -->

<a data-offline="false" data-params="value_id:5557" data-state="contact-map">

<div id="column3" class="col-lg-4 features_col">

<!-- features Item -->

<div class="features d-flex flex-row align-items-center justify-content-start">

<div class="ml-auto">

<div class="features_image">

<img src="https://joycemeyermedia.com/SitecoreFiles/Study/logos/logo-the-word.svg">

</div>

<div class="title">

<h3>HOW TO STUDY BIBLE</h3>

</div>

<div class="button">

<button>START FREE STUDY NOW</button>

</div>

</div>

</div>

</div>

**

<!-- Start of Tab Shows HOW TO STUDY BIBLE section -->

If want to add a new section like HOW TO STUDY BIBLE, just copy the above section from tag <a> to the end of tag

DEVOS TAB

Do the same thing like you modify or create Today or Shows tab.

Important think:

1. In every section script has been added comment. May it can guide you to modify the source code.

2. The CSS made to handle some section. So there is no specific CSS for specific section. Except CSS for header and tabs
